

The COVID-19 vaccine is available for children 5 years and up: talk to your healthcare provider today.

Key points:

1. The COVID-19 vaccine prevents children from getting very sick with and spreading the virus that causes COVID-19.
2. The vaccine is safe for children. It has been tested.
3. After getting vaccinated, children should still take some precautions.

Safe for you,
Safe for the whole family

Luisa gets vaccinated

Dad, I'm worried about going to school. A child in my class has COVID.

It's okay... you are being very careful.

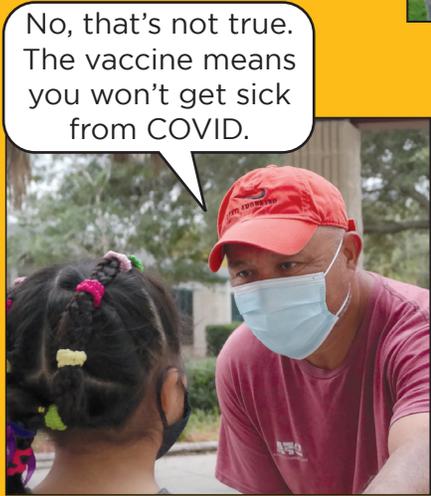

Just keep wearing your mask and wash your hands.

Vaccine? But my friend said it makes you sick, mom! I don't want to get sick.

And when it's time, you can get the vaccine.

No, that's not true. The vaccine means you won't get sick from COVID.

Your dad and I got vaccinated, remember?

We felt a little tired the day of the vaccine, but after that, we felt fine.

And now we are protected! Now we can see your grandparents again.

Oh, so if I get the vaccine, can I play with my friends after school?

Of course. Though you should still play outside and keep your masks on. Ok?

Yea I have to go to class. But I feel better now!

I can't wait until she's vaccinated.

It will be nice not to have to worry.

The vaccine will keep her safe!
